Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for manufacturing an organic electro-luminescent ~~display~~ device, the method comprising the steps of:

providing a ~~light-permeable~~ substrate;

arranging at least one ~~transparent~~ electrode on the ~~light-permeable~~ substrate, the ~~transparent~~ electrode being made of a ~~light-permeable~~ conductive film to form a subassembly;

forming at least one organic layer on the subassembly, the at least one organic layer being made of an organic electro-luminescent medium, so that the at least one organic layer covers the ~~electrodes~~ at least one electrode;

forming a conductive film ~~all~~ over the at least one organic layer; and

removing at least one portion of the conductive film using a radiation method ~~so as~~ to create electrodes that are electrically ~~being electrical~~ isolated from ~~to~~ each other ~~using a radiation method~~.

2. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the step of arranging at least ~~on transparent~~ one electrode comprises arranging a plurality of ~~transparent~~ electrodes in a stripe-like manner.

3. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 2, wherein the step of removing at least one portion of the conductive film comprises creating stripe-like electrodes extending in a direction perpendicular to the stripe-like ~~transparent~~ electrodes.

4. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the step of removing at least one portion of the conductive film using a radiation method comprises using a laser beam.

5. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the step of removing at least one portion of the conductive film using a radiation method comprises using an electron beam.

6. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the step of ~~at least~~ removing at least one portion of the conductive film comprises removing ~~of~~ at least a portion of the organic layer.

7. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the step of forming a conductive film is carried out by vacuum deposition.

8. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 1, wherein the method further comprises ~~the~~ a step of forming a plurality of insulating ribs on the ~~transparent electrodes~~ at least one electrode; wherein ~~and~~

removing the at least one portion of the conductive film includes removing a portion of the conductive film from over ~~on~~ the insulating ribs and includes using a radiation method.

9. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 2, wherein the method further comprises ~~the~~ a step of forming a plurality of insulating ribs in a stripe-like manner on the ~~transparent~~ electrodes, the insulating ribs extending ~~so as to extend~~ in a direction ~~perpendicular~~ perpendicular to the ~~transparent~~ electrodes; ~~and~~

wherein removing the at least one portion of the conductive film includes removing a portion of the conductive film from over ~~on~~ the insulating ribs and includes using a radiation method.

10. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 8, wherein the step of forming the plurality of ribs on the ~~transparent electrodes~~ electrode comprises arranging the plurality of ribs in laterally spaced rows ~~so as to be~~ parallel to each other.

11. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 8, wherein the step of forming the plurality of ribs on the at least one electrode ~~transparent electrodes~~ comprises heating ~~providing heat to~~ the ribs to cross-link the material of the ribs.

12. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 11, wherein the plurality of ribs are made of a photoresist and are ~~will be~~ subjected to heat of approximately 220°C.

13. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 8, wherein the step of forming the plurality of ribs on the ~~transparent electrodes~~ electrode comprises chamfering the edges of the ribs opposite to the ~~transparent electrodes~~ electrode.

14. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 8, wherein the step of ~~at least~~ removing at least one portion of the conductive film comprises removing ~~of~~ at least a portion of an ~~the~~ insulating rib.

15. (Currently Amended) A method for manufacturing a ~~display~~ device according to claim 8, wherein removing ~~of~~ the at least one portion of the conductive film comprises removing parts of an ~~the~~ insulating ~~ribs~~ rib thereby shaping the insulating rib into ~~causing~~ a "U"-shape ~~of the insulating ribs~~.

16. (Currently Amended) An organic electro-luminescent ~~display~~ device comprising:
a ~~light permeable~~ substrate;

at least one ~~transparent~~ electrode arranged on the ~~light permeable~~ substrate and formed of a ~~light permeable~~ conductive film;

a plurality of insulating members comprising a valley and consisting at least partially of an insulating material and arranged on the ~~transparent electrodes~~ electrode;

at least one organic layer ~~each~~ formed of an organic electro-luminescent medium and arranged at least between ~~each adjacent~~ two adjacent ~~of the~~ insulating members; and

upper electrodes ~~each~~ made of a conductive film deposited ~~all~~ over the at least one organic layer.

17. (Currently Amended) A ~~display~~ device according to claim 16, having a plurality of strip-like ~~transparent~~ electrodes.

18. (Currently Amended) A ~~display~~ device according to claim 17, having a plurality of stripe-like isolating members extending in a direction perpendicular to the ~~transparent~~ electrodes.

19. (Currently Amended) A ~~display~~ device according to claim 16, wherein the insulating member comprises portions of the organic electroluminescent medium.

20. (Currently Amended) A ~~display~~ device according to claim 16, wherein the ~~insulating member comprises an~~ insulating material forms ~~provided for creating~~ insulating ribs on the ~~transparent~~ electrode.

21. (Currently Amended) A display device according to claim 16, wherein the ~~insulating member comprises an~~ insulating material forms ~~provided to create~~ insulating ribs on the ~~transparent~~ electrode and the organic electro-luminescent medium is over the insulating ribs ~~on top of it~~.

22. (Currently Amended) A ~~display~~ device according to claim 16 ~~13~~, wherein the ~~insulating member comprises an~~ insulating material forms ~~provided to create~~ insulating ribs on the ~~transparent~~ electrode, the organic electro-luminescent medium is over the insulating rib ~~on top of it~~ and part of the conductive film is over the organic electro-luminescent medium.

23. (Currently Amended) A ~~display~~ device according to claim 16, wherein the insulating member is in the shape of a ~~an~~ "U".

24. (Currently Amended) A ~~display~~ device according to claim 23, wherein the ends of the legs of the "U" comprise the medium of the at least one organic layer.

25. (Currently Amended) A ~~display~~ device according to claim 23, wherein the ends of the legs of the "U" comprise material of the conductive film.
